#### INTERNATION PRELIMINARY REPORT ON PATENTABILITY

International	application	No

PCT/SE 2003/001885

Box	No. I	Basis of the report
1.	otherw	egard to the language, this report is based on the international application in the language in which it was filed, unless ise indicated under this item.  This report is based on a translation from the original language into the following language.
	LJ	This report is based on a translation from the original language into the following language which is the language of a translation furnished for the purposes of:
		international search (under Rules 12.3 and 23.1(b))
		publication of the international application (under Rule 12.4)
		international preliminary examination (under Rules 55.2 and/or 55.3)
2.	furnish	regard to the <b>elements</b> of the international application, this report is based on (replacement sheets which have been need to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" to the new annexed to this report):
		the international application as originally filed/furnished
	$\boxtimes$	the description:
		pages 1-8 as originally filed/furnished
		pages* received by this Authority on
	<b>E</b> 2	
	$\boxtimes$	the claims:  nages as originally filed/furnished
		pages as amended (together with any statement) under Article 19
		pages* 1-2 received by this Authority on 29.10.2004
		pages* received by this Authority on
	$\boxtimes$	the drawings:
		pages 1 as originally filed/furnished
		pages* received by this Authority on
	_	pages* received by this Authority on
		a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing.
3.		The amendments have resulted in the cancellation of:
ļ		the description, pages
		the claims, Nos.
		the drawings, sheets/figs
		the sequence listing (specify):
		any table(s) related to the sequence listing (specify):
4.		This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).
1		the description, pages
		the claims, Nos.
		the drawings, sheets/figs
		the sequence listing (specify):
		any table(s) related to the sequence listing (specify):
	If iten	n 4 applies, some or all of those sheets may be marked "superseded."

Form PCT/IPEA/409 (Box No. I) (January 2004)

#### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/SE 2003/001885

. Statement			
Novelty (N)	Claims	1-14	YE
	Claims		NO
Inventive step (IS)	Claims	1-14	YE
	Claims		NO
Industrial applicability (IA)	Claims	1-14	YE
	Claims	<u> </u>	NO
			•

Documents cited in the International Search Report:

D1: DE 3050507 C1 D2: GB 1446946 A D3: JP 64-048619 A D4: US 4062528 A

The cited documents represent the general state of the art.

The invention defined in claims 1-14 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed method and arrangement. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-14 is novel and is considered to involve an inventive step. The invention is industrially applicable.

1

#### **CLAIMS**

A method of cooling strip or wire products in which, subsequent to being annealed, the product (3) is cooled to a temperature of about 20-50°C beneath its oxidation temperature, where by winding the product (3) around a drum (1) immediately downstream of an annealing path so that the product (3) will lie in mutual juxtaposed turns whereafter the product after a number of turns, is unwound from the drum (1), **characterised in** that the product is wound onto the drum (1) through a number of turns such that said product (3) will be cooled to a desired temperature, and wherein the drum (1) is given a diameter that exceeds the diameter at which the product (3) will be influenced mechanically by plastic deformation.

10

15

25

30

- 2. A method according to Claim 1, characterised by placing the drum (1) in a closed housing (2) that includes a product inlet opening (4) and a product outlet opening (5) and by causing a shielding gas atmosphere to be maintained in the housing (2).
- 3. A method according to Claim 2, characterised by using argon, hydrogen gas or nitrogen gas or corresponding shielding gases as the shielding gas atmosphere.
- A method according to any one of Claims 1-3, characterised by cooling the drum (1) with the aid of a forced convection effect with its surrounding atmosphere.
  - 5. A method according to any one of Claims 1-4, characterised by cooling the drum (1) with the aid of an external coolant which is caused to cool the inside (7) of the drum (1).
  - 6. A method according to any one of Claims 1-5, characterised by constructing the drum (1) from a material that has good thermal conductivity, such as metallic material.
  - 7. A method according to any one of the preceding Claims, characterised by driving the drum (1) with the aid of a drive motor.

AMENDED SHEET

An arrangement for cooling strip or wire material products where the product is cooled to a temperature of about 20-50°C beneath the oxidation temperature of said product after having been annealed, **characterised** in that the product (3) is wound onto a drum (1) immediately downstream of an annealing path such that the turns of the product (3) will be mutually juxtaposed, wherein the product is unwound from the drum (1) after having been wound onto the drum through a number of turns, wherein the number of turns on the drum (1) is such as to cool the product (3) to a desired temperature, and wherein the drum (1) has a diameter which exceeds the diameter at which the product (3) is influenced mechanically by plastic deformation.

10

9. An arrangement according to Claim 8, characterised in that the drum (1) is located in a closed housing (2) that has an inlet opening (4) and an outlet opening (5) for the product (3); and in that the housing (2) contains and maintains a shielding gas atmosphere.

15

10: An arrangement according to Claim 9, characterised in that the shielding gas atmosphere consists of argon, hydrogen gas or nitrogen gas or a corresponding shielding gas.

20 1

11. An arrangement according to any one of Claims 8 to 10 inclusive, characterised in that the drum (1) is cooled with the aid of a forced convection effect from its surrounding atmosphere.

25

- 12. An arrangement according to any one of Claims 8 to 11 inclusive, characterised in that the drum (1) is cooled with the aid of an external coolant which functions to cool the inside (7) of the drum (1).
- 13. An arrangement according to Claim 12, characterised in that the drum (1) is made of a material that has good thermal conductivity, such as metallic material.

30

14. An arrangement according to any one of Claims 8 to 13 inclusive, characterised in that the drum (1) is motor-driven.

AMENDED SHEET
